

## Introducing Interactive Study Material

Increase student engagement with the online study material

### What are Interactive Study Materials?

Consisting of **Interactive Video**, **Interactive Audio**, and **Interactive Document**, the Interactive Study Materials tools turn students into active, engaged learners with a deeper comprehension and better retention of the taught material.

### How do Interactive Study Materials work?

These tools allow teachers to add in-line questions and discussion points to the online study material. They support the flipped classroom method, so students can complete the activity in their own time, pace and place. This results in more valuable in-class discussions.

### Why should I use Interactive Study Materials?

This tool:

- Integrates **seamlessly into Blackboard**: group, grade book and calendar synchronization.
- Provide **extensive student progress oversight** to the instructor.
- Stimulate a **collaborative and creative learning environment** by encouraging in-depth discussion between peers and peer-groups.

### How to get started?

### Curious about other Tools?

**Read here** how FeedbackFruits can help you to make all your courses more engaging.

#### Texas A&M International University

Having to create a remote course that maintains student engagement and helps learners develop academic reading skills, the instructor needed to find a pedagogical tool that could put these goals into practice.

Interactive Document was then adopted to help improve academic reading capacity in the course.

"The great thing about Interactive Document was I could point out to them which section of the article helps you find a specific piece of information."

- Lecturer

#### Leiden University Medical Center

In a blended course for first year medical students, the instructor adopted a flipped classroom approach to enhance students' active consumption of the video lectures.

Interactive Video was adopted to facilitate this stage, as the tool allows the instructor to add in-line practice questions to his recorded videos.

"There has been a noticeable spike in the overall average grade in the class compared with previous years."

- Jeroen de Wilde, lecturer

#### Utrecht University

In a hybrid course that involves before-class preparation and online/offline lecture, the instructor used Interactive Video and Interactive Document to generate a more interactive learning experience.

Questions and comments were added to course videos and documents to guide students' comprehension and interaction with the study materials.

Students feel that classes are more interactive when they give input in these ways,"

- Yvette Linders, lecturer
